1. General contractor when applying for building permit will be asked about applying for TCI. The application shall be filled out at our office and notarized. In the event no general contractor involved the electrical contractor may fill out form.
 2. Electrical Permit shall be issued for each TCI request. The electrical contractor for this job will be the responsible party for taking out permit.
 3. TCI for service is for construction use only. Temporary lighting/outlets shall be installed according to NEC 590.
 4. The roof and all outside windows and doors shall be installed and must be capable of being locked when no one is on premises working. In a dwelling unit the sheet rock must be installed, and a consultation with the inspector about renovations done, prior to requesting inspection.
 5. Applicant shall notify all trades that power is going to be turned on prior to energizing.
 6. During the time that the applicant is not on the job site the energized system shall be secured and locked.
 7. During work hours the energized electrical system shall be constantly supervised by the applicant.
 8. All other areas to be energized shall be completed, inspected, and approved before energizing. The AHJ (authority having jurisdiction) is the inspector.
 9. AHJ may disconnect power and cancel temporary power permit if any part of new feeders or branch circuits have been energized without approval. Energizing for testing is OK but power shall not be left on.
 10. No furniture can be placed in building without stocking permission and all trades signed off on the site building permit.
 11. No person shall occupy any area of the building before a Certificate of Compliance is issued even, for setting up computers. Consult with AHJ about Partial Finished areas.
 12. The electrical service equipment must be complete; including all grounding and bonding requirements.
 13. All feeders to sub-panels must be installed. Exception: AHJ may give permission not to install.
 14. All 125 volt, 15 and 20 ampere receptacles, authorized by the AHJ for construction use, shall be protected by suitable Ground Fault Circuit-Interrupter protection (GFI).
 15. All line shields, interior trims, or dead front covers shall be installed on utilized panels.
 16. If the General Contractor removes his company from the job, whoever takes over the job shall fill out a new application.
 17. If the Electrical Contractor removes his company from the job, whoever takes over the job shall re-permit the TCI.
- I have read this form and fully understand and agree to the rules and policies as stated: and I further, agree to follow the NC State Building and Administration Code pertaining to Temporary Power and wiring.
